DO NOT FABRICATE / DO NOT ENERGIZE P48V  
8 electrically designed OAM seats (first stuffing: 2 modules / 6 DNP OK – no respin).  
16x Molex 218910–1115, 5.00 mm stack, 12–layer 2.0 mm stuffed–switch TARGET. Outline 492 x 372 mm.  
4x2 of 103x166 mm KOZ = 412x332 mm INFERRED tiling (not a UBB drawing).  
All 8: named PE toward 2x PM8536B–FEI DNP (x8/GCD; SW0=0–3, SW1=4–7). No CEM invented.  
Host stub: X11DPH–T 3x Gen3 x16 + 4x Gen3 x8 keepout. Two CPU x16 = switch uplinks.  
X11DPH–T / NH–D9 DX–3647 / B550M are NOT on this PCB. Chamber A mATX is not this PCB.  
S1–S7 NOT routed (no xGMI). TEST\*/RFU/DO\_NOT\_USE unmapped. PVREF never driven.  
P48V: SB175 long–edge entry + ~15A fuse/seat + LOCAL pours on 16 Conn0 pads. NOT a 100A flood.  
Molex 2026–08–18: CSA 60V (COFC 80170713) at OCP P48V; skip pins = published map, no extra NC.  
OPEN: 1.2 A/contact at 48–59.5 V (2 oz). HOST\_PWRGD is ENABLE. No GPU VRM. P12V2 Unknown/may be NC.  
Dell D3000E–S1 is 12 V CRPS – do not mix into P48V. P3V3 = Conn0 C1/C2 only. Never r2.0.

The figure is a large, empty grid intended for a schematic diagram. The grid is defined by a coordinate system with columns labeled 1 through 8 at the top and bottom, and rows labeled A through F on the left and right. The grid area is light gray, and the grid lines are thin and light gray. In the bottom right corner, there is a title block with the following text:

r2.0 UNUSABLE. P3V3=Conn0 C1/C2. 12L 2.0mm stuffed-switch TARGET. Star-fed P48V.  
Pin names: OAM Pin map rev 1.0.xlsx — OCP generic, NOT AMD overlay  
Documentation sheet — no invented nets  
DO NOT FABRICATE. DO NOT ENERGIZE P48V. Molex 60V written 2026-08-18; 1.2A/contact OPEN.

r2.0 UNUSABLE Rev3=Conn0 C1/C2. 12L 2.0mm stuffed–switch–large–P48V. Pin names; OAM Pin map rev 1.0.xlsx – OCP generic, NOT AMD overlay. Documentation sheet – no invented nets DO NOT FABRICATE. DO NOT ENERGIZE P48V. Molex 60V written 2026–08–18; 1.2A/contact OPEN.

Sheet: /02\_Host\_PCIE\_Stub\_OAM0\_1/  
File: 02\_host\_pcie\_stub.kicad\_sch

**Title: Host PE stub (all 8 seats via DNP PM8536)**

|                    |                  |                           |
|--------------------|------------------|---------------------------|
| Size: A3           | Date: 2026–08–21 | Rev: Rev3_8Seat_PCBWay_v1 |
| KiCad E.D.A. 9.0.9 |                  | Id: 4/14                  |

OAM0 connector instances – FIRST STUFF candidate (2 modules / 6 DNP OK).

Footprint: Molex 218910-1115 candidate (geometry). Hermaphroditic – mates with itself (Farnell 2189101115: Mates With 2189101115; mated height 5.00 mm).

Pad nets assigned on the PCB from the v1.0 CSV for this seat:  
P48V/P12V1/P3V3/GND, PE (16 lanes) toward SW0 PM8536B-FEI DNP (seats 0-3),  
PE\_REFCLK / PERST# / HOST\_PWRGD (ENABLE). S1-S7 have NO NET (no xGMI).  
TEST#/RFU/D0\_NOT\_USE unmapped. PWRREF is a module output – never drive.  
P12V2 named from v1.0 but Unknown / may be NC. P48V is a LOCAL power after a -15 A fuse keepout.

MODULE\_ID / LINK\_CONFIG 1k pulldowns NOT placed (AMD overlay unknown).

r2.0 UNUSABLE. P3V3=Conn0 C1/C2. 12L 2.0mm stuffed-switch TARGET. Star-fed P48V.  
Pin names: OAM Pin map rev 1.0.xlsx - OCP generic, NOT AMD overlay  
Documentation sheet - no invented nets  
DO NOT FABRICATE. DO NOT ENERGIZE P48V. Molex 60V written 2026-08-18; 1.2A/contact OPEN.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 2 | 3 | 4 | 5 | 6 | 7 | 8 |   |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |   |   |   |   |   |   |   | B |
| C |   r2.0 UNUSABLE. P3V3=Conn0 C1/C2. 12L 2.0mm stuffed–switch TARGET. Star–fed P48V.  
Pin names: OAM Pin map rev 1.0.xlsx – OCP generic, NOT AMD overlay  
Documentation sheet – no invented nets  
DO NOT FABRICATE. DO NOT ENERGIZE P48V. Molex 60V written 2026–08–18; 1.2A/contact OPEN.

Sheet: /04\_OAM1\_Connectors/  
File: 04\_oam1\_connectors.kicad\_sch

Title: OAM1 connectors

Size: A3Date: 2026–08–21

KiCad E.D.A. 9.0.9Id: 6/14

Rev: Rev3\_8Seat\_PCBWay\_v1

OAM2 connector instances – electrically designed; module may be DNP.

Footprint: Molex 218910-1115 candidate (geometry). Hermaphroditic – mates with itself (Farnell 2189101115: Mates With 2189101115; mated height 5.00 mm).

Pad nets assigned on the PCB from the v1.0 CSV for this seat:  
P48V/P12V1/P3V3/GND, PE (16 lanes) toward SW0 PM8536B-FEI DNP (seats 0-3),  
PE\_REFCLK / PERST# / HOST\_PWRGD (ENABLE). S1-S7 have NO NET (no xGMI).  
TEST#/RFU/D0\_NOT\_USE unmapped. PWRREF is a module output – never drive.  
P12V2 named from v1.0 but UNKNOWN / may be NC. P48V is a LOCAL power after a -15 A fuse keepout.

MODULE\_ID / LINK\_CONFIG 1k pulldowns NOT placed (AMD overlay unknown).

     r2.0 UNUSABLE. P3V3=Conn0 C1/C2. 12L 2.0mm stuffed–switch TARGET. Star–fed P48V.  
Pin names: OAM Pin map rev 1.0.xlsx — OCP generic, NOT AMD overlay  
Documentation sheet — no invented nets  
DO NOT FABRICATE. DO NOT ENERGIZE P48V. Molex 60V written 2026–08–18; 1.2A/contact OPEN.

Sheet: /06\_OAM3\_MechPower/  
File: 06\_oam3\_connectors.kicad\_sch

Title: OAM3 connectors

Size: A3Date: 2026–08–21

Rev: Rev3\_8Seat\_PCBWay\_v1

KiCad E.D.A. 9.0.9

Id: 8/14

OAM4 connector instances – electrically designed; module may be DNP.

Footprint: Molex 218910-1115 candidate (geometry). Hermaphroditic – mates with itself (Farnell 2189101115: Mates With 2189101115; mated height 5.00 mm).

Pad nets assigned on the PCB from the v1.0 CSV for this seat:  
P48V/P12V1/P3V3/GND, PE (16 lanes) toward SW1 PM8536B-FEI DNP (seats 4-7),  
PE\_REFCLK / PERST# / HOST\_PWRGD (ENABLE). S1-S7 have NO NET (no xGMI).  
TEST#/RFU/D0\_NOT\_USE unmapped. PWRREF is a module output – never drive.  
P12V2 named from v1.0 but UNKNOWN / may be NC. P48V is a LOCAL power after a -15 A fuse keepout.

MODULE\_ID / LINK\_CONFIG 1k pulldowns NOT placed (AMD overlay unknown).

OAM6 connector instances – electrically designed; module may be DNP.

Footprint: Molex 218910-1115 candidate (geometry). Hermaphroditic – mates with itself (Farnell 2189101115: Mates With 2189101115; mated height 5.00 mm).

Pad nets assigned on the PCB from the v1.0 CSV for this seat:  
P48V/P12V1/P3V3/GND, PE (16 lanes) toward SW1 PM8536B-FEI DNP (seats 4-7),  
PE\_REFCLK / PERST# / HOST\_PWRGD (ENABLE). S1-S7 have NO NET (no xGMI).  
TEST#/RFU/D0\_NOT\_USE unmapped. PWRREF is a module output – never drive.  
P12V2 named from v1.0 but UNKNOWN / may be NC. P48V is a LOCAL power after a -15 A fuse keepout.

MODULE\_ID / LINK\_CONFIG 1k pulldowns NOT placed (AMD overlay unknown).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |   |   |   |   |   |   |   | A |
| B | | C |
